### **DETAILED ACTION**

1. Amendment filed on 1/3/06 has been received.

#### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1,6, and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Weitzenhof (U. S. Patent no. 5,009,401).

See figure 2 damper 2 closed section 8 with opening that element 15 is inserted, upper, lower and side walls, bolts 9 attached from the bottom of flange/mounting portion 10.

#### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-5, 7-12, 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Weitzenhof in view of Hurst et al.

Weitzenhof is relied upon as above. Weitzenhof does not disclose the use of a temporary fixing means. Hurst teaches the use of hook-shaped locking projections

39,41 to temporarily attach a mount plate of a damper and then securing with locking fasteners 44. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use a temporary fixing means as taught by Hurst et al in the device of Weitzenhof in order to ease assembly by holding the device in place while the fasteners are tightened.
